DARK SKY RESOLUTION

NMNWSE recognizes that the night sky is part of the cultural and scientific heritage of all humanity, which should be preserved and protected. NMNWSE further recognizes that light pollution is a visible and needless waste of resources contributing to global warming. NMNWSE urges its members to reduce their own contributions to light pollution. NMNWSE further encourages its members to help make others aware of the importance of preserving dark night skies and the negative impacts of light pollution on astronomical research, nocturnal species, energy conservation, and human behavior.

(adopted Oct. 2006)

 [Policies & Procedures](#)

Background Information

History: To help increase public awareness of the impact of light pollution on the scientific value of dark night skies, NMNWSE voted in 2004 to consider adopting a Dark Sky Resolution. The above resolution was adopted by vote of the membership at the 2006 NMNWSE Annual Meeting.

Light Pollution Definition: Any adverse effect of artificial light including sky glow, glare, light trespass, light clutter, decreased visibility at night, and energy waste. See also the [Wikipedia light pollution entry](#).

some Resolutions and Working Groups of other entities:

[New Mexico Night Sky Protection Act](#)

[New Mexico Heritage Preservation Alliance](#)

[British Astronomical Association](#)

[American Physical Society](#)

International Dark Sky Association

The [International Dark Sky Association](#) (IDA) is generally recognized as an authority on light pollution. The IDA has recently entered into an agreement with the [Illuminating Engineering Society of North America](#) (IESNA), the recognized technical authority on illumination in the U.S., to develop a [Model Lighting Ordinance \(MLO\) and companion Design Guidelines](#) for regulating outdoor lighting appropriate to the needs of communities, the environment, and the natural habitat.

IDA Information Sheets address many issues associated with light pollution, including
